

## TERMINATION BAR

Termination Bar is a multi-purpose, pre-formed, professional way to attach a wide variety of construction waterproofing, drainage board and flashing systems.

### DESCRIPTION

Termination Bar is a high strength, plastic strip designed to support vertical membrane systems at their termination point. This plastic composite is ultra-violet resistant, will not rust, and is non-conductive for additional job site safety. Each ten foot strip has pre-drilled holes for easy installation.

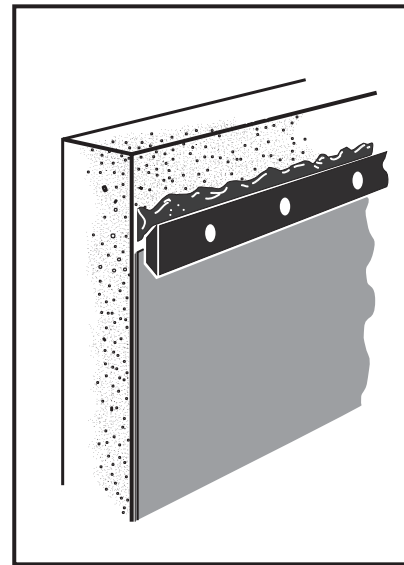

### USES

Termination Bar provides an excellent, professional looking solution for top terminations with below-grade waterproofing membranes and/or drainage board systems whenever backfilling operations may be delayed. (May be used as an installation option with MEL-ROL®, MEL-GARD®, AIR-SHIELD™, PROTECTION COURSE and MEL-DRAIN™ Systems).

With the added flexibility provided by pre-drilled holes every six inches, cavity wall flashing materials can now be properly installed with confidence. Our unique, trapezoidal design provides a reservoir for caulks/mastics at the top termination.

### RELATED MEADOWS PRODUCTS

PROTECTION COURSE	No. 712
MEL-ROL	No. 714
MEL-GARD	No. 717
AIR-SHIELD	No. 718
MEL-DRAIN	No. 719
POINTING MASTIC	No. 740

### FEATURES AND BENEFITS

- Pre-fabricated, ready-to-use/Cost effective
- Made of special, high strength plastic/Adapts to building wall irregularities
- Pre-drilled holes every 6"/Anchors a variety of material widths
- Trapezoidal design/Provides trough for caulks or mastics beads
- Non-corrosive/Will not rust
- Provides neat looking terminations/Professional appearance

### TECHNICAL DATA

- Length: 10' (Holes every 6" o/c, 2" in from either end)
- Pieces/carton: 25 pieces (250LF/carton)
- Color: White
- Weight per carton: 20 lbs.
